

NOW AVAILABLE! Eco-Friendly ECO-Ultra Synthetic Oil

Jim Sigel Automotive is pleased to now offer Universal ECO-Ultra oils for your automotive needs. The ECO-Ultra oil is a re-refined synthetic blend that combines recycled oil that is re-refined into a basestock with high performance additives through an environmentally-friendly closed-loop process. The end result is synthetic blend oil that meets or exceeds manufacturer specifications with the added benefit of decreasing the environmental impact of the oil refining process and lowering our dependence of foreign oil.

As consumers we recognize the value of recycling. Not only do we recycle plastic, paper, cardboard and glass, but we eat and drink from recycled plastic and aluminum products. With today's technology there is no need to worry about how to dispose of used motor oil in an environmentally-friendly way. With products like ECO-Ultra we can recycle and reuse the oil already in circulation.

Did you know that it takes 50 barrels of crude oil to make 25 gallons of conventional 5W30 motor oil! But now with Universal ECO Ultra's re-refined motor oil, only one barrel of used/post consumer oil is used to make the same 25 gallons of motor oil.

On your next visit, ask about our environmentally-friendly ECO-Ultra motor oil

- Environmentally-friendly, saves energy, reduces pollution
- Lower's use of and dependence on foreign oil
- Formulated with premium re-refined base oil and high performance additives through an environmentally-friendly closed-loop process
- Meets or exceeds manufacturer, ILSAC GF-4, API SM requirements
- Variety of viscosities available, including an ECO-Ultra for diesels!
